Release: 2026-09-19

v6.1.4 makes Number of chats to export per ZIP / #inZip apply to both Full Project and ALL Full Chat exports.

Full Project batching

A Full Project export is processed sequentially in batches. If a project contains 12 chats and #inZip is set to 5, the extension produces three ZIP files containing 5, 5 and 2 chats. Each batch is returned to the starting ChatGPT page and finalized before the next batch begins.

ALL Full Chat batching

ALL Full Chat uses the same batch-size control. It always exports each selected chat in FULL mode; Start/End message controls do not apply.

File export

Upload Files and Download Files remain independent options. The existing chat Markdown collection is preserved; referenced files are then retrieved for the Upload/ and Download/ folders.

ZIP naming

When multiple batches are required, filenames use a part suffix such as __part-001-of-003.zip.

Example

Project chats	Setting	Result
12	#inZip = 5	3 ZIPs: 5 + 5 + 2 chats
5	#inZip = 5	1 ZIP: 5 chats
13	#inZip = 5	3 ZIPs: 5 + 5 + 3 chats

Version history

v6.1.4 — Full Project now respects the configured chats-per-ZIP value and finalizes each project batch independently. Existing ALL Full Chat batching is preserved.

v6.1.3 — File-download handling fixes and attachment URL validation improvements.

v6.1.2 — ALL Full Chat batching, account-aware ZIP names, and documentation updates.
