

- Floating EXP control. Single click starts/stops a forced Full Chat export.
- Double-click opens Mini mode.

Mini mode

- Compact controls: Start Export, FULL/START/END, PROJECT, UPLOAD FILES, DOWNLOAD FILES and message count.
- For ALL Full Chat, #inZip controls the maximum number of chats placed in each ZIP.

Maxi control

Control	Purpose
Number of messages to export	Message count used by START and END modes. FULL modes ignore this value.
Number of chats to export per ZIP	Maximum number of chats in each ALL Full Chat ZIP.
Export Full Chat	Export the complete current conversation.
Export ALL Full Chat	Export all discovered account chats, sequentially and in ZIP batches.
Export Full Project	Export all discovered chats from the current Project.
Export Uploaded Files	Bundle retrievable User uploads into Upload/.
Export Downloaded Files	Bundle retrievable Assistant download offers into Download/.
Set your own location	Ask for a save location when supported.
User / Dev Switch	Developer diagnostics on/off.

Selected toggles/modes are blue; inactive options are gray. Position, size and options are stored locally.

EXPORT MODES

From one message range to a complete account

Mode	What it exports	Output
Export Full Chat	Entire current conversation after crawl / expansion.	ZIP
Export From Start	First N collected messages.	Markdown
Export From End	Last N collected messages.	Markdown
Export Full Project	All discovered chats in the current Project.	Project ZIP + INDEX.md
Export ALL Full Chat	All discovered account chats, processed sequentially and split according to #inZip.	One or more ZIPs + INDEX.md per batch

Important: *Number of messages to export* applies only to START and END. FULL Chat, FULL Project and ALL Full Chat ignore the message-count limit.

ALL Full Chat batching

- The extension discovers the account chat list and processes chats sequentially.
- If #inZip = 50, at most 50 chats are assembled into each ZIP.
- The batch is finalized before the next batch starts, reducing peak memory and lowering the risk of browser crashes on large accounts.
- Each batch is independently usable and contains its own index.
- The ALL export does not use From Start or From End.

ALL FULL CHAT

Account-wide export without the giant single ZIP problem

Export ALL Full Chat is designed for accounts containing hundreds or thousands of conversations. Rather than accumulating the complete account in one archive, it divides the workload into deterministic batches.

Example

1,247 chats with `<b>#inZip = 50</b>` produces 25 ZIP batches. The final batch contains the remaining chats.

Processing model

- Discover the available account chats.
- Process one chat at a time and reuse the Full Chat collector.
- Collect Markdown plus enabled Upload/Download files.
- Close the current batch and produce its ZIP.
- Release batch data before continuing with the next batch.

The ALL export intentionally has no Start/End message-range controls: every selected chat is exported in FULL.

Account name in ZIP filename

The account name is incorporated into the ALL Full Chat ZIP filename when it is available from the active ChatGPT session. A safe fallback is used if the account name cannot be resolved.

Example filename:

Export ALL Full Chat - AccountName__export_2026-09-11-06-30-00__part-001-of-025.zip

FILE INTELLIGENCE

Uploads and files offered for download, physically bundled

Uploaded files

Files attached by the User are detected by filename and represented inside the Markdown. When Export Uploaded Files is enabled, eligible bytes are bundled in Upload/.

Files to download

Clickable Assistant file offers are inventoried by count and filename and their bytes are bundled in Download/ when enabled.

Failure-tolerant design

If a filename is detected but its bytes cannot be retrieved, the text export can still succeed. Developer logs record skipped URLs, failed retrievals and attachment counters.

ARCHIVE FORMAT

Structured ZIPs with ordinary Markdown

Full Chat

ChatName__export_YYYY-MM-DD-HH-MM-SS.zip

Inside:

ChatName__export_YYYY-MM-DD-HH-MM-SS/ → Markdown + Upload/ + Download/

Full Project

Full Project - ProjectName__export_....zip

ALL Full Chat

Export ALL Full Chat - AccountName__export_....__part-001-of-025.zip

Each ALL batch contains the Markdown and related Upload/Download directories for its chats, plus an INDEX.md at the ZIP root. Batches remain independently readable.

INDEX.MD

A batch summary without opening every chat

For ALL Full Chat, each ZIP contains a root INDEX.md with batch-level totals and a per-chat inventory.

```
# Export ALL Full Chat - AccountName
```

```
Export date/time: 2026-09-11 06:30:00<br/>Batch: 1 / 25<br/>Chats in batch: 50<br/>Total  
messages: 3,412<br/>User messages: 1,620<br/>Agent messages: 1,792
```

```
## Chats
```

```
1. CHAT001<br/>- File: `...md`<br/>- Total messages: 47<br/>- User messages: 24<br/>- Agent  
messages: 22<br/>- Uploaded files: 3<br/>- Files to download: 2
```

Failed chats are reported in an Export errors section so successful chats remain usable.

MARKDOWN OUTPUT

Readable metadata before the conversation

```
# ChatName<br/>Export date: 2026-09-11 06:30:00<br/>Source: https://chatgpt.com/...<br/>Total  
messages: 47<br/>User messages: 24<br/>Agent messages: 22<br/>Files to download: 2<br/>---<br/>##  
1. user<br/>...<br/>---<br/>## 2. assistant<br/>...
```

- Readable — no proprietary viewer is required.
- Searchable — use grep, ripgrep, desktop search or indexing tools.
- Diffable — Markdown works naturally with Git and text diffs.
- Convertible — transform to HTML, PDF, DOCX or another format later.

QUICK START

Install and export in minutes

- Install — Download or clone the public repository, extract the versioned folder, open brave://extensions/ (or chrome://extensions/), enable Developer mode, click Load unpacked and select the folder.
- Open ChatGPT — Reload existing ChatGPT tabs if the extension was installed after the page was already open.
- Choose a mode — Mini for normal operation, Maxi for full control or Button mode for one-click exports.
- Choose the export — Full Chat, Start, End, Full Project or ALL Full Chat. Enable Uploaded Files and/or Downloaded Files when binary attachments should be bundled.
- For ALL Full Chat — set #inZip / Number of chats to export per ZIP. A value such as 50 is a practical starting point for large accounts.
- Save — Use the save picker when supported, browser Downloads fallback or a Developer Target Folder.

Tip: ALL Full Chat is designed to avoid processing the entire account in one memory-heavy operation. Each ZIP is finalized before the next batch begins.

DEVELOPER MODE

Built-in diagnostics for real-world DOM changes

- Timeout — Increase the export timeout for very large chats or Projects.
- Target Folder — Choose direct output when the browser supports directory access.
- Reload Ext — Reload the extension and refresh relevant ChatGPT tabs during development/testing.
- LOG — Download a snapshot with version, state, page URL, metrics and runtime events.

Useful diagnostic signals: messages collected · containers seen · Show more rounds · crawl steps · Project chats · ALL chats · uploaded attachments · downloaded attachments · attachment failures · batch number.

When a large ALL export fails, Maxi → Dev → LOG is the preferred diagnostic artifact.

PRIVACY & SECURITY

Local-first by design

- No custom backend — No NoXoZ-operated export server, analytics endpoint or telemetry pipeline is part of the extension.
- Local output — Exports are saved through browser mechanisms to local storage chosen by the user/browser.

Permission

activeTab / scripting — Operate the extension on ChatGPT pages.
storage — Persist local UI and export settings.
tabs — Coordinate navigation, show/hide and reload behavior.
Allowed hosts — chatgpt.com, chat.openai.com, *.oaiusercontent.com, *.openai.com

Exported archives can contain sensitive conversation text and attachments — protect the local ZIP/Markdown with the same care as the original material.

LICENSE

Source-available, not open source

v6.1.2 is distributed under the NoXoZ Personal License v1.0.

What the public repository allows

Source inspection and authorized personal, non-commercial use of the official, unmodified release.

What requires written authorization from the Licensor

Redistribution, republishing, commercial exploitation, independent store publication, rebranding, and modified public releases.

Author: NoXoZ.be — Bruno DELNOZ.

ARCHITECTURE

Simple runtime, observable workflow

Runtime file	Responsibility
manifest.json	Manifest V3 metadata, permissions, injection and icons. Declares v6.1.2 / version_name v6.1.2.
content-export.js	UI, crawl, role classification, Markdown, ZIP, Project index, ALL-chat batching, file detection and diagnostics.
background.js	Toolbar behavior, Project/ALL coordination, tab navigation, extension reload and attachment fetch bridge.
export-style.css	Button / Mini / Maxi interface styling and Developer panel.

ChatGPT rendered page → collect / expand / classify → Markdown builder + upload/download inventory + attachment fetch bridge → ZIP / Markdown assembly → local save picker / Target Folder / browser download

USE CASES & FAQ

Where ChatGPT Export is useful

- Technical projects — archive architecture discussions, code generation, debugging trails and generated release files.
- Research — preserve multi-chat investigations with a root index and file context.
- Documentation — turn an active Project or an entire account into a local Markdown corpus.
- Audit trail — keep source URLs, timestamps, message counts and filenames together.
- Migration — move useful ChatGPT work into local knowledge bases or version-controlled repositories.
- Large-account backup — export all chats in controlled ZIP batches using #inZip.

Common questions

Does Number of messages to export limit ALL Full Chat? No. ALL Full Chat always exports each selected chat in FULL.

What does #inZip do? It sets the maximum number of chats placed into each ALL Full Chat ZIP.

Can the account name appear in the ZIP filename? Yes, when the active ChatGPT session exposes the account name; otherwise a safe fallback is used.

Does ALL Full Chat use From Start / From End? No. Those controls are not used by ALL Full Chat.

Can it export uploaded and generated files? Yes, when the corresponding options are enabled and the files are retrievable.

Is this an OpenAI product? No. ChatGPT Export is an independent NoXoZ.be project.

Portable. Inspectable. Local.

ChatGPT Export @NoXoZ.be · Public release v6.1.2

This guide documents the v6.1.2 feature set, including ALL Full Chat batching and account-aware ZIP naming. ChatGPT is a third-party service; changes to its rendered interface can require extension maintenance.
